Nottingham Tram

Thales Translink

GAI-Tronics provide communication products and systems for Transport sectors. The telephones are designed to withstand extreme environments including dust, dirt, salt, vibration, snow, rain and heat making them ideal for Road, Rail, Tram and Underground applications.

The Help Point Telephone increases the safety and efficiency of areas such as platforms by giving easy access to Emergency and Information lines. The telephones provide hands free loudspeaking communication using autodial buttons connected to pre-programmed numbers.

GAI-Tronics are able to customise products according to your specifications and usage.

The GAI-Tronics Help Point Telephone is fully electronic, ruggedised and weather resistant. The telephone can be flush or surface mounted and is designed to be fixed to a vertical surface by vandal resistant tamper proof screws. Both VoIP and analogue versions are available to enable wider integration options onto your network.

The option of SMART (Self Reporting And Monitoring Telephone) software allows the telephones' status to be remotely monitored for call and fault reporting 24 hours a day. Constant access to this information, as well as the ability to reprogram the autodial button numbers from a remote location at any time allows real time troubleshooting.

The Help Point telephone is already in use on many UK railway stations, and can also be found on tram stations and roadsides in the UK and around Europe. Customisation means that your corporate guidelines can be followed and the help point will stand out for all the right reasons!

Whatever your requirements, GAI-Tronics can provide you with an effective communication solution.
