

## Hands-free telephones

An updated range of products was introduced in March 2008. The updated versions of Help Point and VR (Vandal Resistant) hands-free telephones conform to additional rail standards and have RoHS compliance.

The easiest way for you to work out which user guide you need for your help point is to look at the speaker pattern.

- If the telephone has speaker holes that form an **oval** on the faceplate (see yellow example below), please refer to **user guide 0076**.
- If the telephone has speaker holes that form a **full circle** of holes on the faceplate (see blue example below), please refer to **user guide 0122**.

OVAL SPEAKER HOLES
